

Wow! 25 years in business. It has been a fantastic, rewarding experience. It is hard to imagine all the progress we have made in the last 25 years. Here is a look back at the history of COR®BON/Glaser products.

I was introduced to handgun hunting in the early 80's and loved the sport. At that time, there were no specialty bullets for handgun hunting of large and dangerous game. I studied ballistics and developed ammunition for my own hunting needs. I had become good friends with Larry Kelly of Mag-Na-Port fame and J.D. Jones of SSK Industries, both avid world famous handgun hunters. They gave me a lot of insight as to what was needed to bring down large and dangerous game with a handgun. Larry & J.D. were preparing to leave for an African safari to shoot the Big Five or Grand Slam consisting of, Buffalo, Lion, Elephant, Rhino and Leopard. After discussing their needs with me, I designed something special for their upcoming hunt, a prototype 44 Magnum with a 305gr Penetrating bullet. It was used to harvest the first African Grand Slam with a handgun. A credit to Kelly and Jones. A national article was written about their hunt and in 1982 my hobby quickly changed overnight into a much sought after business. Following the success of the Penetrator, I

designed the very first bonded core handgun-hunting bullet. The name COR BON was derived from a process that bonded the lead core to the jacket to give a bullet high weight retention and deep penetration.

In 1982, I graduated from the Michigan Police Reserve Academy and worked part time as a range instructor. In 1985, there was a big push in law enforcement circles to change from the traditional revolver to the 9mm-auto pistol. I knew there was a need for a good 9mm round. I introduced the very first, high velocity, high performance hollow point designed specifically for law enforcement use.

Feeling that civilians also needed the very best, Cor®Bon Ammo became the first to sell police-spec ammo to civilians. COR®BON's 9mm+P 115gr JHP load has been proven to produce the most stopping power of any conventional jacketed hollow point.

In 1995, we out grew the facility in Detroit and I set out to build a state of the art manufacturing plant. South Dakota was chosen for it's great business climate. In April, we moved to Sturgis, South Dakota hired and trained a new workforce and produced the largest Law Enforcement order in company history. A major accomplishment for any business in 30 days.

In 1997, COR®BON introduced, the 400 COR®BON, the first new Auto Pistol Cartridge since the 40 S&W. The 400 COR®BON combined the best features of the

45 Auto and the 10-mm Auto. Next came the 440 COR®BON, the most powerful auto pistol-hunting cartridge in the world.

In 2000, our family purchased the Glaser Safety Slug Company of California, the pioneer of High Performance pre-fragmented ammo. Glaser ammunition was noted for being the choice of the Sky Marshall program. Glaser has been a great addition to the COR®BON family of cartridges.

In early 2002, we formed a strategic alliance with Smith and Wesson of Springfield, MA to develop a series of cartridges, based on a totally new revolver design. The 500 S&W Magnum and 460 S&W Magnum are now regarded as pinnacles of success. They have become the choice of handgun hunters around the world.

In March of 2004, COR®BON/Glaser became a member of SAAMI (The Sporting Arms and Ammunition Manufacturers Institute). This gives COR®BON/Glaser products tremendous credibility as a major player in the shooting industry.

In April of 2004, I was awarded a US Patent for my PowR'ball bullet design. The notable features of PowR'ball are feed reliability and deeper penetration than conventional jacketed hollow points.

In January of 2005, We introduced our new DPX line, featuring the solid copper Barnes X bullet. These state of the art bullets have greater expansion and deeper penetration than anything else on the market. Since they do not have any lead, they can be used on ranges that are lead free. It is becoming the load of choice in Law Enforcement circles.

I'm proud to have our two sons working along side of us. Pete Jr. and Dane are committed to providing our customers the best products and customer service in the industry.

In closing I want to thank you, our Customers for placing your trust in COR®BON/Glaser products and making it such a success over the last 25 years.

Peter R. Pi Sr. President

Premium Quality Since 1982		

COR®BON's research and development team have designed an environmentally friendly line of ammunition, featuring a solid copper projectile....

COR®BON products have earned a distinctive reputation in the industry with our high energy JHP ammuniton. Being consistent with this standing, we have combined the higher energy in our new DPX line along with its deeper penetration to make this the optimum load for Law Enforcement, and Civilian use.

DPX offers impressive expansion and deeper penetration from the solid copper Barnes X Bullet and retains 100% of its weight even when shot through barriers such as clothing and steel. The permanent crush cavity is considerably larger than a typical JHP due to deeper penetration.

High Velocity

Reduced Recoil

For over 30 years, Glaser Safety Slug has been the perfect choice for use in populated, urban areas. Glaser's composite design uses a special thin-wall jacket, and a precision compressed lead shot core with a soft polymer tip. This construction provides optimum balance between penetration and fragmentation. The round nose profile guarantees feeding reliability. Stopping power is maximized by the complete dispersal of the bullet energy into the intended target with immediate shock and trauma. This rapid fragmentation delivers the energy into a large area. Reduced recoil allows a fast recovery for follow up shots if necessary. We feel that this makes Glaser the best choice for defensive situations.

Glaser Blue penetrates 5-7" in *IWBA protocol testing, using #12 shot compressed into a nearly solid form. Glaser Blue is suggested for use in warmer climate areas where lighter clothing will not effect penetration. Glaser Silver offers 8-10" of penetration in *IWBA protocol testing. It is produced with #6 shot. Glaser Silver is suggested for use in colder climate areas where heavy clothing or jackets require deeper penetration. Both Glaser Silver and Blue will excel in any defensive situation. It is always important to know what is behind your target, but in worse case scenarios Glaser's are the best for reducing ricochet and over penetration.

*International Wound Ballistics Association Protocol - 10% ordnance gelatin covered with four layers of denim.

Unequaled Stopping Power

Glaser Blue Utilizes #12 shot compressed into a nearly solid form. The Glaser Blue produces immediate energy dispersal into the target, reducing the possibility of over penetration and creating abrupt stopping power. The numerous projectiles expand outward generating an effective wound cavity and creating a secondary stretch cavity.

Glaser Silver is produced with #6 shot. With the Silver load, you get much larger segments, deeper penetration and controlled energy release.

^{***} Glaser Silver is not available in all calibers.

COR®BON Traditional Jacketed Hollowpoints

The Original.

COR®BON's traditional jacketed hollowpoint ammunition made its reputation with "High Velocity" ammuntion. This high velocity combined with our exclusively designed jacketed hollowpoint bullets creates a very effective self defense load. Penetration and expansion in ordnance gelatin are excellent. With depth of penetration generally varying from 9-12 inches, while expansion may range from 11/2 to 2

times the original bullet diameter, depending on caliber.

At COR®BON, we still believe that velocity is king! Higher energies enhance bullet performance and increase Stopping Power!

COR®BON HUNTER

COR®BON got it's start making custom hunting ammunition for hunters going to Africa to shoot large and dangerous game.

COR®BON bonded core soft point bullets are designed to retain their weight and stay together. Deep penetrating, along with expansion are the key to excellent performance in large game.

COR®BON's Penetrator and Hard Cast lead loads are designed for large tough skinned, heavy boned game. A heavy full jacket is used with a hard linotype lead core for the Penetrator loads. The Hard Cast load is made from a hard linotype lead with a proven flat LBT nose design. These loads cause a through and through hole, even breaking the heaviest bone. Our customers have taken game as large as Moose and Brown Bear in Alaska and Cape Buffalo in Africa.

The Pioneer of Handgun Hunting Ammo

Edward Folmar and the Cape Buffalo he shot with COR®BON's 45-70 Govt. 405 gr. Flat Point Penetrator.

Load Development

Our excellent professional research and development department will find the best tailored load for your rifle or pistol. We use state of the art equipment to ensure your gun obtains peak velocity and supreme accuracy. This is a custom service done specifically for your gun. COR®BON Customs clientele will also receive test targets & ballistic drop charts out to 300 yards.

Rifles: \$249.00

Pistols:\$159.00

Loaded Ammunition is available for both rifles and pistols at an additional cost.

For more information on this service please call:

Pete Pi, Jr.

605.347.4544 or 800.626.7266

COR®BON Fieldshots

Dan McGough Corsican Ram 460S&W 200 gr. DPX.

James Swidryk Kudu 454 Casull 320 FPPN

John Cates American Bison 460 S&W 275gr DPX

"Thank you for a Great American made product that I will use my entire hunting career".
